ICU

USER GUIDE

Document Name:	ICU USER GUIDE
Document Version:	1.3
Date of Release:	27 th August 2020
<i>Version</i>	<i>Amendment</i>
1.1	Updated Control Out electrical characteristics
1.2	Mounting Instructions Added, Section 6.0 Updated 16Way 'Serial' pinout
1.3	Added recommendation to restart device in red box at end of section 1.1.1 Removed 1.2.2 – Adding IP cameras Added section 2.1 – Powering Up ICU Device Added 3.1.1 – Adding a Mask Action Inserted 7.0 Using Customer local application (REST API)

Table of Contents

1	REGISTERING YOUR DEVICE	3
1.1	OVERVIEW	3

1 REGISTERING YOUR DEVICE

1.1 Overview

To register your ICU device, you must log on to the ICU device and register that ICU device to your user account. You logon to the ICU device via the network connection.

1.1.1 Logging onto the ICU device

To log on to the device you must plug the ICU device into the network and find the IP address of the device.

1. Insert the USB key and Ethernet cable. Power up the unit

2. Remove USB once blue light shows on ICU

3. Insert USB into PC and open the new text file

icu.ip.address

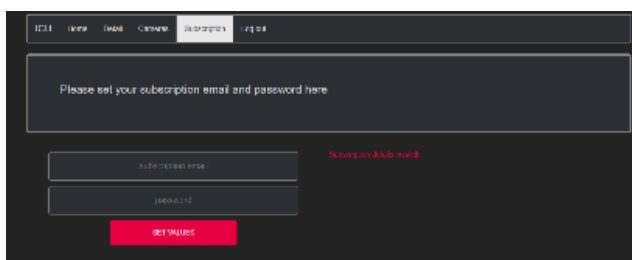

4. Type the IP address into any browser (Google Chrome is recommended)

5. To access your device, enter:
Login: admin Password: admin123

6. You will now be prompted to enter your account details. Enter your details as supplied by Innovative Technology.

You have now successfully registered your new ICU to your online account.

It is recommended you restart the device after plugging in your camera

1.2 Setting up your camera(s)

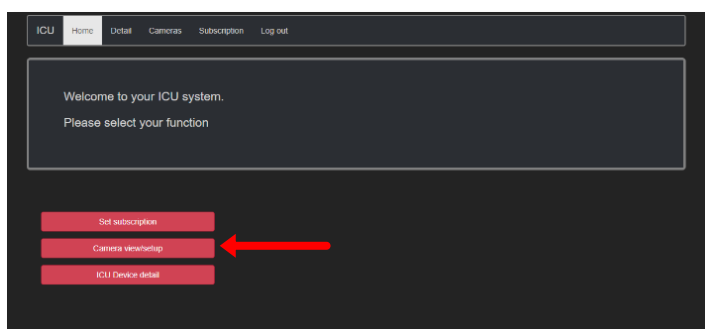

- i** USB and IP cameras can be use with the ICU Device

1.2.1 USB Cameras

1. Plug USB camera into either USB port

2. Click 'Camera view/setup'.
This will open the camera configuration page

3. Enter Camera Name
This name will refer to this camera throughout your account

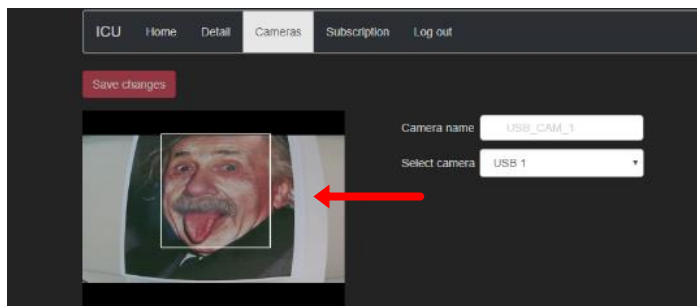

4. Select USB input

5. Once connected you will see a live view from your camera

i You can connect 2 cameras per ICU device

**Now you have registered your device and installed your cameras.
Next is to login to your on-line account and configure your unit.**

2 CONFIGURING YOUR DEVICE

2.1 Power up your ICU Device

b) Insert Ethernet cable and USB Camera

a) Insert Power cable. When LED turns blue Device is powered up (approx. 60s)

2.2 Logging onto your account

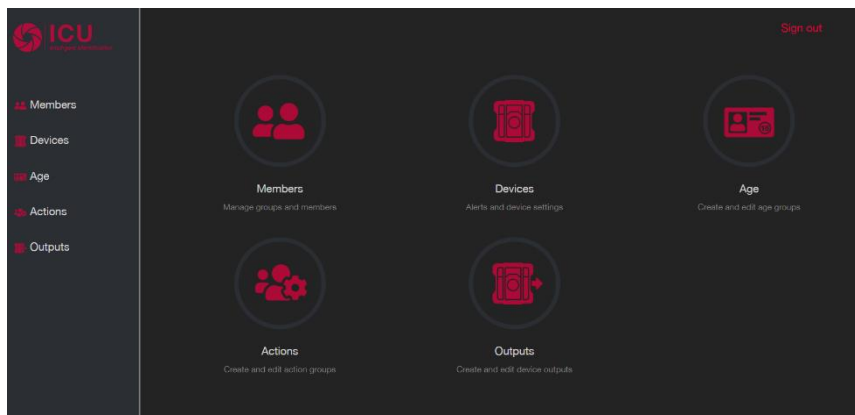

1. Login to your on-line account to configure your unit(s)

i Web address: <https://icu.innovative-technology.com/>

2. Enter your email and password as provided by ITL – this will open your ICU dashboard

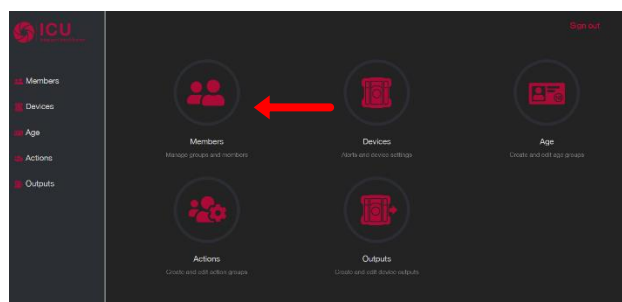

i Please ensure your ICU Device is connect to Network so any change can be synced with the Device

2.3 Members

i Members are faces which can be added to your account. Once added to your account these Members will be shared with all ICU Devices registered with your account

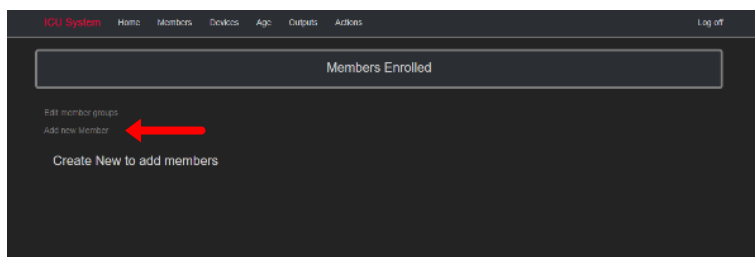

2.3.1 Adding Members

1. Click on Members

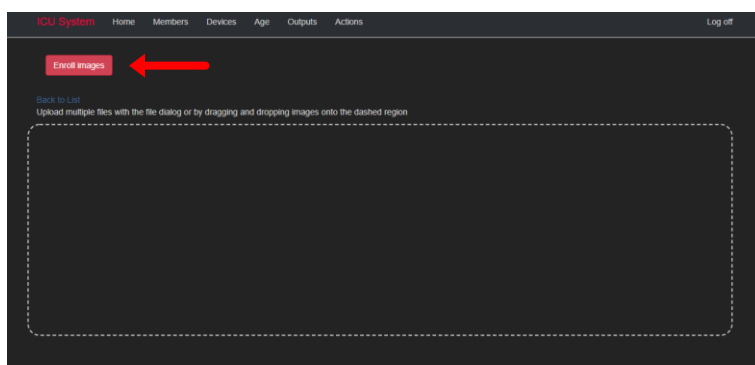

2. Click on Add New Member

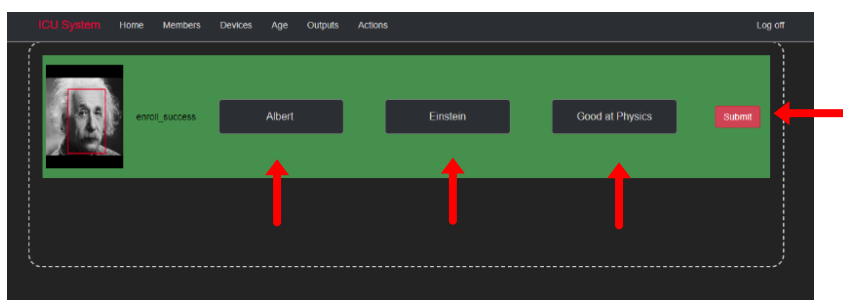

3. Simply drag and drop single or multiple image files into the dashed area. Click on Enroll Members to add each face

i Your images will be automatically checked and saved to optimal format

4. Enter the details for the member Click on submit

**You have now added member(s) to your account.
Next step is to create Groups and add members to specific Groups**

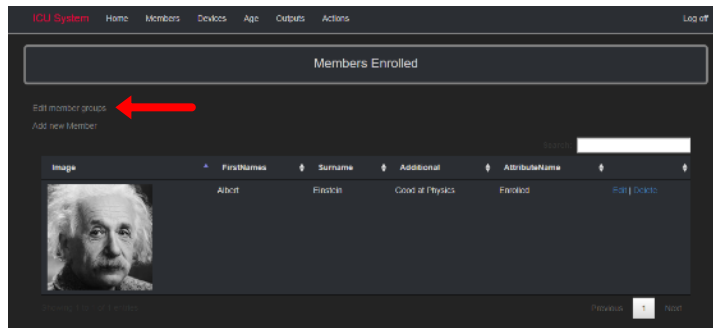

2.4 Groups

Groups are a collection of Members. Once you have populated your Groups with your Members, specific Actions can be defined

2.4.1 Creating a Group

1. Click Edit Member Groups

2. Click Create New

3. Enter Group Name Click Create

All your created Groups will now appear in the table

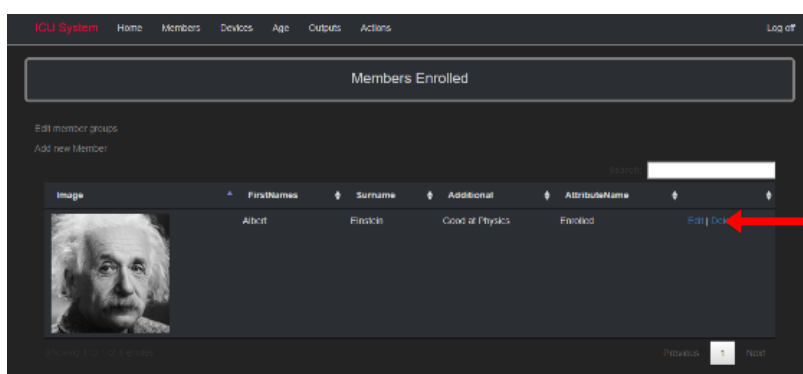

i You can define as many different Groups as you wish. These definitions will be shared with all Devices connected to your account

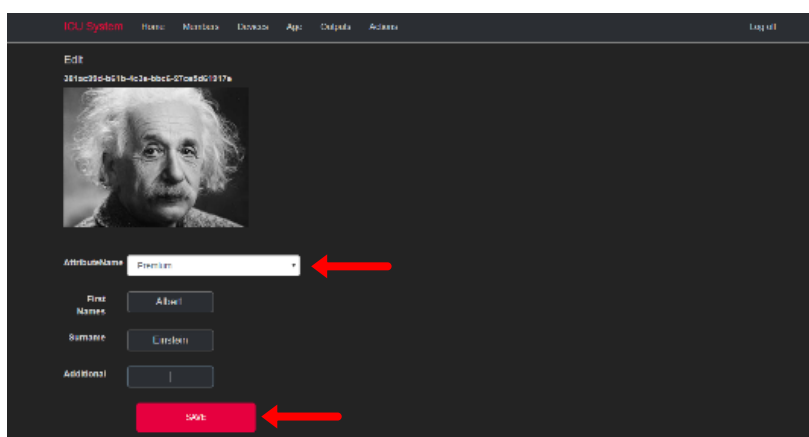

2.4.2 Adding Members to Groups

i The default group for any added Member is Enrolled. Any Member can be added to any created groups as follows:

1. Click on Members from the ICU Dashboard
Click Edit

2. Any created Group will appear in the drop-down menu
Select the Group and click Save

That specific Member is now part of that specific Group.

Specific ICU Device Actions can now be setup to respond to the defined Groups.

First, you must define the Outputs for a Device.

2.5 Adding Outputs

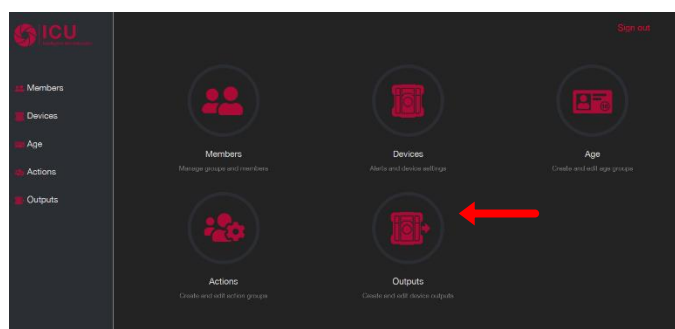

i Outputs are how you want the ICU Device to respond when presented with a specific Group

Output	Description
Control OUT 1	Open Collector Drivers (Drive solenoids)
Control OUT 2	
Serial	Comm port (SSP). Compatible with ITL note validators
Post URL	JSON post sent to specified URL
ITL-Relay	Trigger smart relay located on Network

2.5.1 Creating an Output

1. Click Outputs from the main ICU Dashboard
This will open a list of all created Outputs
You can edit an existing Output or Create a New Output

ICU System				Home	Members	Devices	Age	Outputs	Actions	Log off
Outputs										
Create New										
ActionName	ActionType	ActionData								
GPIO 1	ICU-OUT	ONE	Edit Delete							
GPIO 2	ICU-OUT	TWO	Edit Delete							
Green LED	ICU-LED	green	Edit Delete							
LED Purple	ICU-LED	purple	Edit Delete							
LED TEAL	ICU-LED	teal	Edit Delete							
RED LED	ICU-LED	red	Edit Delete							
Yellow LED	ICU-LED	yellow	Edit Delete							
POST to url	POST-URL	https://icu-callback.azurewebsites.net	Edit Delete							

2. To create a new output
Click on *Create New*

To select which output, click on the desired output on the ICU Device image

Example 1 : To define an output on Control Out One

Click on ControlOut One on the Device image

Members

Devices

Age

Actions

Outputs

Create An Output

Mouse over desired output

Back to List

Sign out

Name

Trigger Gate

Type a name for this output

Type

ICU-OUT

OUT Number

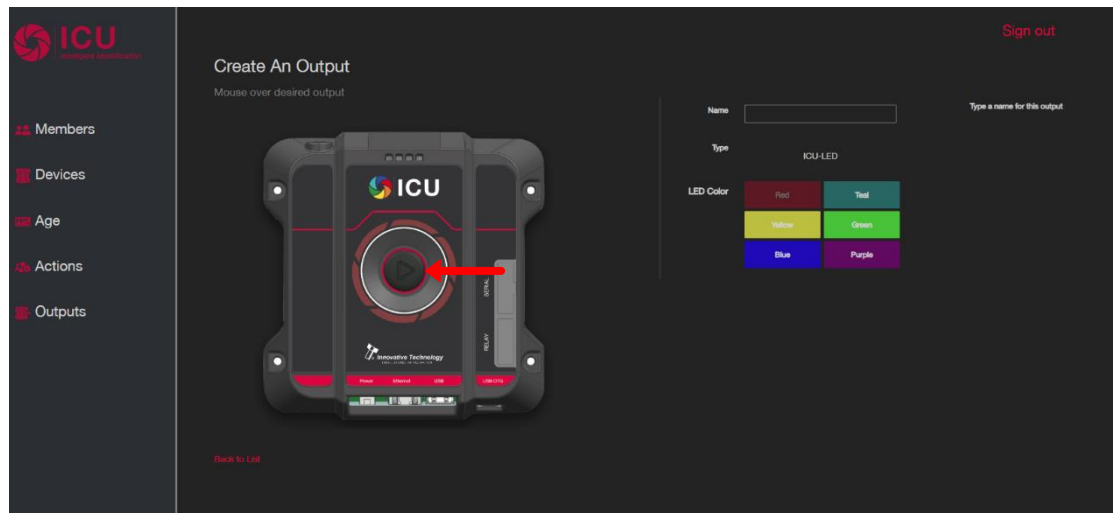

ONE

Create

1. Click on *Control/Out One* on the Device image
2. This will open the adjustable parameters
3. Chose a name for this output
4. Click Save

Example 2 : To define an output on Device LED

1. Click on LED on the Device image
2. Chose a name for this output
3. Click the desired colour of the LED
4. Click on Save

These new Outputs will now be added to the table of defined Outputs.

2.6 Adding Actions

i Actions are one or many Outputs you wish to perform in response to a Member of a specific Group

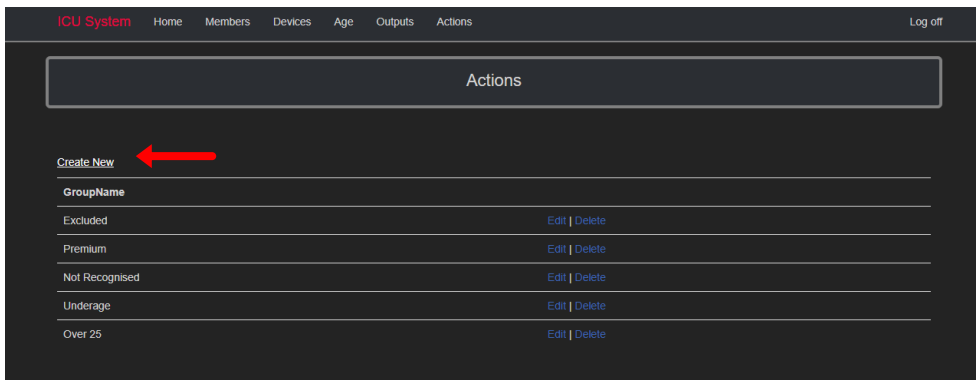

2.6.1 Creating a new Action

1. Click Actions from the main ICU Dashboard

2. This will open a list of all created Actions
You can edit an existing Action or Create a New Action
To create a new Action click Create New

3. Enter the name of the Action and click Create

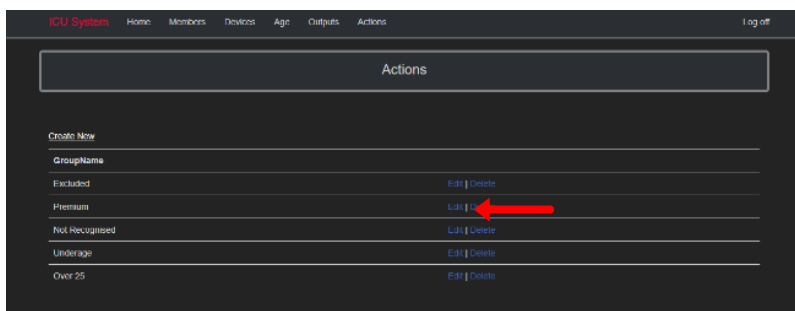

i You have now created a new Action. You can now edit this Action to add Outputs

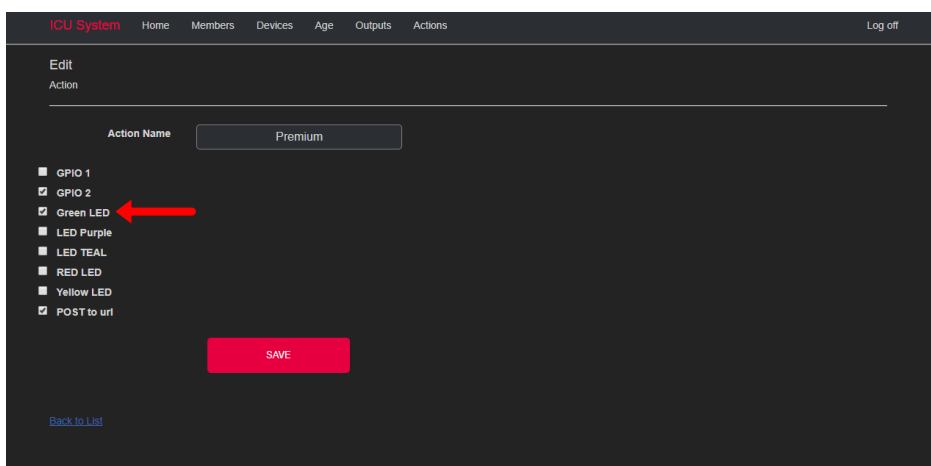

2.6.2 Adding Outputs to Actions

1. Click Edit on a specific Action

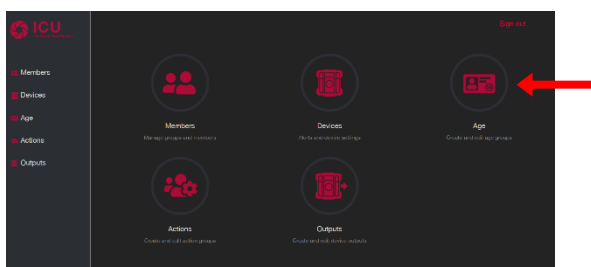

2. This will open all available Outputs to assign to the specific Action
To assign an Action simply click the checkbox next to it

2.6.3 Adding an Age Action

i With ICU it is possible to return an age estimation. Some applications may require an Action depending on the age of the returned. This section will detail how to setup the age-related Actions.

1. Click on Age from the main ICU Dashboard
This will display any age specific Actions previously defined

2. Create a new Action by clicking Create New

The screenshot shows the 'Age' configuration page in the ICU System. At the top, there's a navigation bar with 'Home', 'Members', 'Devices', 'Age', 'Outputs', and 'Actions'. Below this is a search bar labeled 'Age'. The main section is titled 'Set Age Group' and contains a table with two rows. The first row has '25' in the 'Age' column, 'less than' in the 'Compare' column, and 'Edit | Delete' in the 'Actions' column. The second row has '25' in the 'Age' column, 'greater than' in the 'Compare' column, and 'Edit | Delete' in the 'Actions' column. A red arrow points to the 'Create New' link below the table.

3. Specify an age Specify a comparison i.e. if Age < 25 etc.

The screenshot shows the 'Create Age Group' form in the ICU System. It has a navigation bar with 'Home', 'Members', 'Devices', 'Age', 'Outputs', and 'Actions'. Below this is a search bar labeled 'Age'. The form has two input fields: 'Age' with the value '25' and 'Compare' with the value 'less than'. A red arrow points to the 'CREATE' button below the form. There is also a 'Back to List' link at the bottom left.

4. Click on Create to add the new Age Action

The screenshot shows the 'Create Age Group' form in the ICU System. It has a navigation bar with 'Home', 'Members', 'Devices', 'Age', 'Outputs', and 'Actions'. Below this is a search bar labeled 'Age'. The form has two input fields: 'Age' with the value '25' and 'Compare' with the value 'less than'. A red arrow points to the 'CREATE' button below the form. There is also a 'Back to List' link at the bottom left.

The defined Actions can now be applied to a specific device.

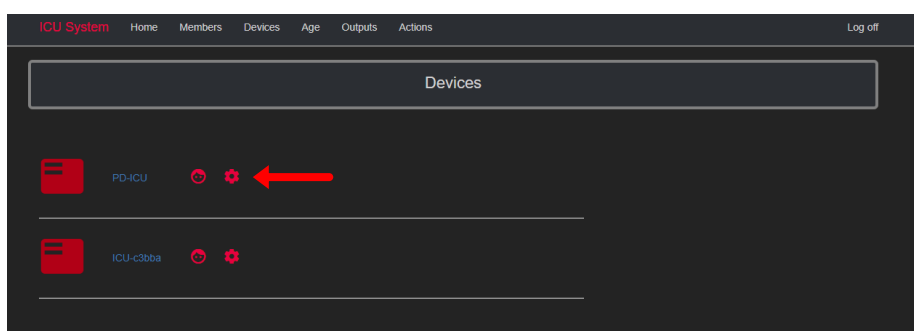

3 APPLYING ACTIONS TO SPECIFIC DEVICES

i This section will detail how you can configure specific ICU Devices to react to specific Member Groups

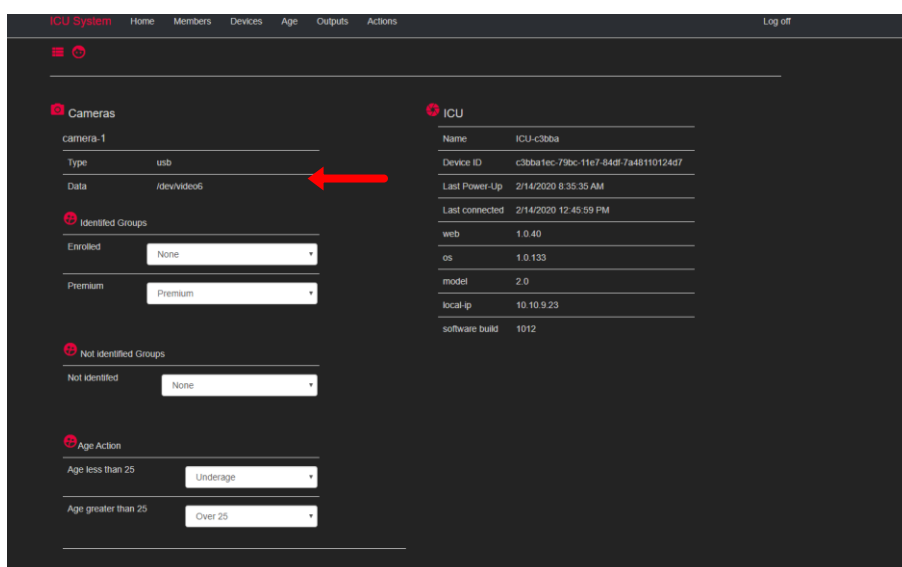

1. Click on Devices from the main ICU Dashboard
This will display all ICU Devices registered to your account

2. Click on the Settings icon to open information and configuration options for that Device

3. All Actions for specific cameras for that Device can be defined here

4. Defined Groups will appear
Defined Actions can be assigned to specific Groups by the drop-down menu

The screenshot shows the ICU System interface with a sidebar containing links for Home, Members, Devices, Age, Outputs, and Actions. The main content area is divided into two panels. The left panel, titled 'cameras', shows configuration for 'camera-1' with fields for Type (usb), Data (dev/video6), and Premium (Premium). Below these are sections for 'Identified Groups' (Enrolled: None, Premium: Premium), 'Not identified Groups' (Not identified: None), 'Age Action' (Age less than 25: Underage, Age greater than 25: Over 25), and 'Mask Action' (on: Mask detected, off: None). The right panel, titled 'ICU', shows device details for 'ICU-c3bba', including Device ID, Last Power Up, Last connected, web, os, model, local-ip, and software build. Red arrows point to the 'None' dropdowns in the 'Not identified Groups' section.

3.1.1 Adding a Mask Action

Mask actions can be applied to specific devices. This feature will automatically appear on each device specific settings (if enabled).

Actions can be applied to both if a mask is detected and if a mask is not detected. Actions are defined as per section 2. To select an action simply chose from the drop-down menu.

The screenshot shows the ICU System interface with a sidebar containing links for Members, Devices, Age, Actions, and Outputs. The main content area shows configuration for 'Excluded' and 'Excluded2' (both set to None). Below these are sections for 'Not identified Groups' (Not identified: None), 'Age Action' (Age less than 25: Underage, Age greater than 25: None, Age less than 20: None), and 'Mask Action' (on: Mask detected, off: None). The 'Mask Action' section is highlighted with a red dashed circle. A 'Restart the Device' button is visible in the top right. A 'Save Changes' button is at the bottom.

You have now configured your specific Device to react to faces presented to the attached cameras

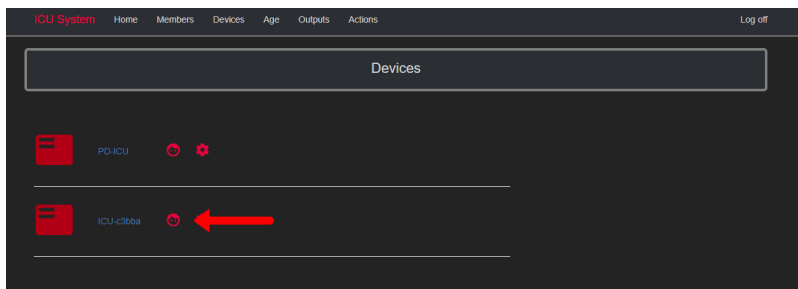

4 TESTING YOUR DEVICE CONFIGURATION

i To test your Device configuration, you can present a member to the camera

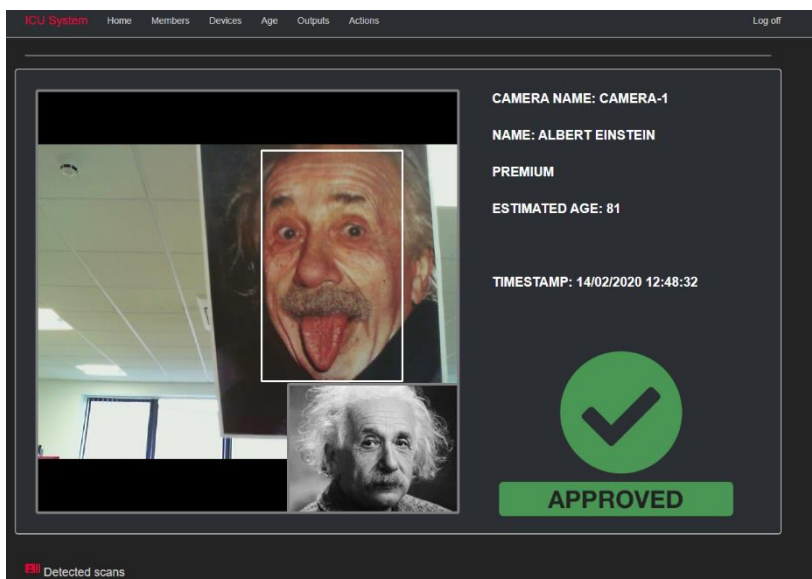

1. Click on Devices from the main ICU Dashboard

2. Click on the Face icon to open the Alerts page

3. This opens a page where you can monitor recent activity on that camera

5 DEVICE INTERFACE PINS

Serial	
PIN 1	Serial Data Out 1 (Tx)
PIN 2	Serial Data Out 2 (Tx)
PIN 3/4	Reserved for future use
PIN 5	Serial Data In 1 (Rx)
PIN 6	Serial Data In 2 (Rx)
PIN 7	Logic Input 1
PIN 8	Logic Input 2
PIN 9	Logic Output 1
PIN 10-13	NC – No internal connection
PIN 14	Logic Output 2
PIN 15	System +V _{in}
PIN 16	System 0V / GND

ControlOUT	
PIN 1/7	0V / GND
PIN 1/6	V _{out} for inductive loads
PIN 2/3	High current output driver 1
PIN 4/5	High current output driver 2

Control OUT 1 & 2 are Open Collector Drivers and are intended to be able to drive a load such as a solenoid

6 MOUNTING INSTRUCTIONS

The Device should be securely mounted to a flat surface using the 4 mounting holes provided. These are indicated in the diagram below.

7 USING LOCAL CUSTOMER APPLICATION (REST API)

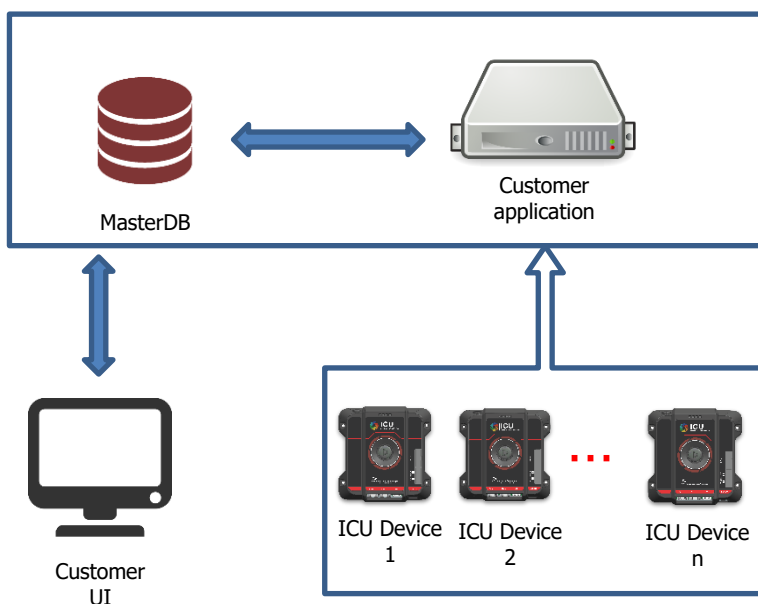

The customer application contains multiple REST API clients to communicate with individual ICU API services.

The customer application also controls and maintains the customer database.

- All data will be saved local in a local customer MasterDB.
- The ICU device is an API service to the customer application client. The customer application communicates to the ICU device via the ICU REST API.
- An API will run on the ICU Device which will allow enrollment of new members.
-

Overview of Infrastructure

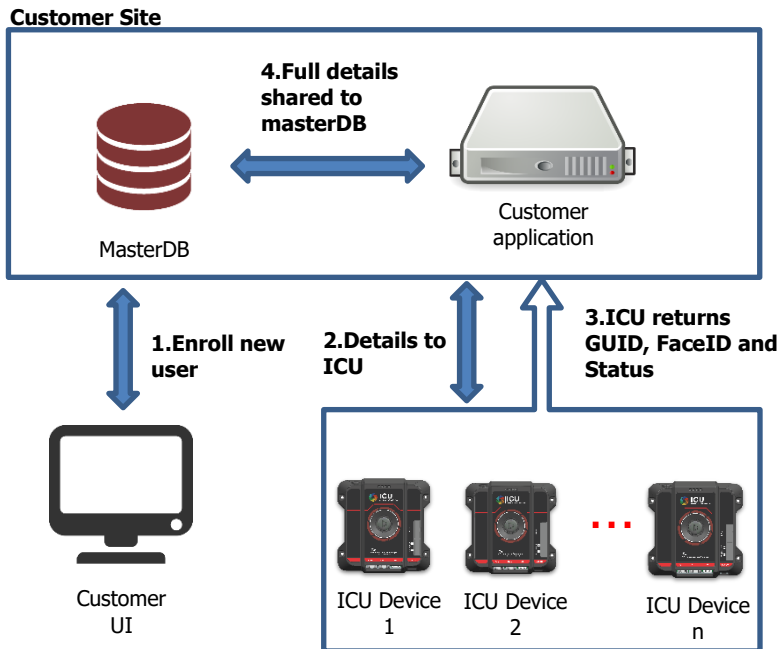

Customer Site

Customer application	Contains REST API client.
MasterDB	Local database containing all information relating to every enrolled member
Customer UI	User portal to interact with the customer application. All tasks are initiated via the customer UI.
ICU Device	Configured to be a RESET API service to the customer application REST client. It is possible to control 1 to n amount of ICU Devices

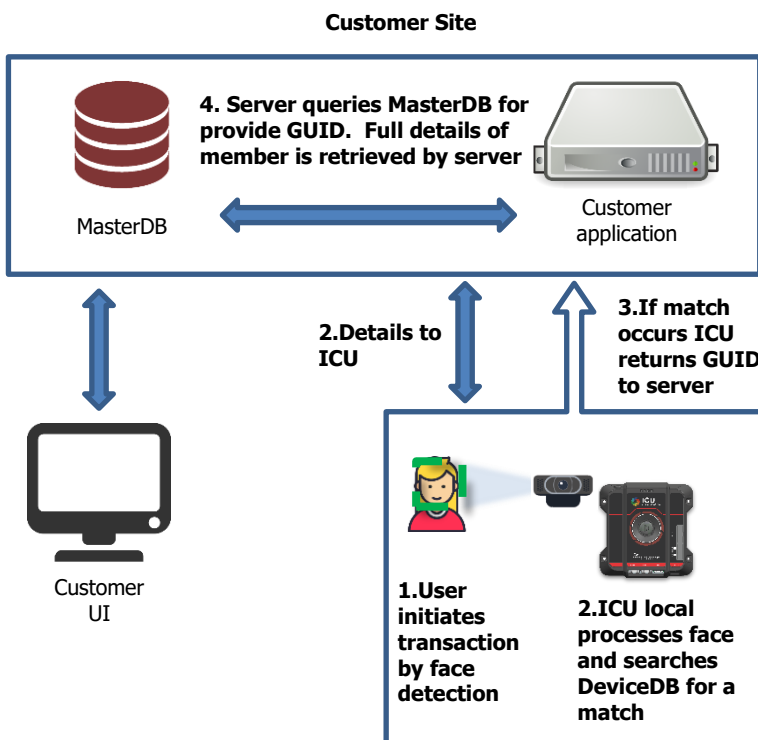

Scenario I: Enrolling a new member

- 1 A command is sent to from customer UI to server
- 2 Server sends details to selected ICU Device to produce GUID, FaceID, Status
- 3 ICU returns GUID, FaceID, Status to server
- 4 Server creates new entry on MasterDB with returned details and additional personal details from enrollment
- 5 Application shares details (GUID, FaceID, Status) to all connected ICU devices

Scenario II: Performing a recognition task

- 1 Face detection initiates the transaction on the ICU Device
- 2 ICU Device produces a FaceID and searches DeviceDB for a matching stored entry
If a match is found ICU returns GUID and current live image to server. It also performs any configured Actions for that member. Estimated Age is also returned
- 3 If no match is found ICU performs an age estimation and returns Age and live image to server. Any configured Actions relating to Age are also performed
In both cases ICU DeviceID and subsequent camera and location is returned to customer application by device poll or API POST
- 4 Application creates queries MasterDB with returned GUID to retrieve member details. Member details can now be shared with customer UI.
- 5 Application can be configured to perform additional tasks – i.e. call a SMS API, store transaction detail etc

8 EXAMPLE FACES

The following faces can be used to test the ICU Device.

Test Members are also added by default.

TEST FACES	
Member	Group
1. Obama Real	Premium
2. Obama Fake	Excluded
3. Einstein Real	Premium
4. Einstein Fake	Excluded
5. Underage 1	Under 25
6. Underage 2	Under 25

9 GLOSSARY

Action	<p>An Action is a Device response to a Member of a specific Group</p> <p>Actions are defined as 1 or more Outputs.</p> <p>For example, in gaming, you may have an excluded Group that consists of Excluded Members. You may have Outputs that 1) Disable a machine and 2) Send an Alert.</p> <p>The Action is defined as the 2 Outputs in response to the Excluded Member</p>
API	<p>An API (Application Programming Interface) allows one program to communicate with another program.</p> <p>For ICU, this enables customers to access the capabilities of the Algorithm (request FaceID and age estimation) without any hardware Device.</p>
Control Out	<p>This driver is intended to be able to drive up to two separate inductive loads for applications such as door access relays or solenoids.</p> <p>This drive duration is limited to 10 seconds but can be re-engaged within 100ms.</p> <p>A voltage source is provided by the ICU and the driver pin sinks the current. (details above)</p>
Device	<p>Device is the hardware component of the ICU solution. All processing is done locally on the Device.</p> <p>The Device has several Interfaces for easy integration with several external machines. The Device allows easy integration and in combination with the cloud solution, offers a <i>plug and play</i> solution for facial recognition.</p>

DeviceID	This is a unique number which is assigned to each Device . The DeviceID can be used in the JSON_POST to determine the location from which the alert was posted.
DeviceDB	The DeviceDB is a database which is saved on the Device . This contains a GUID , FaceID and GroupID . This database allows the Device to operate both in real time (in response to a Member) and independent of an internet connection. It is not possible to extract any personal details from the DeviceDB .
Ethernet	Ethernet refers to one of the interfaces on the Device . The connection is a RJ45. Ethernet is used to connect to the User_Account , send JSON_Posts and connect to IP Cameras .
FaceID	The FaceID is a large number that the algorithm produces to describe a Face.
GroupID	The GroupID is a unique ID that can be assigned to a specific Group .
Group	A Group is a collection of Members which share some a common attribute. For example, Members can be defined as part of an <i>Excluded Group</i> . Actions can be associated with Groups – this means the Device will react in response to a specific Group . There is no limit to the number of Groups a user can define.
GUID	A GUID is a unique reference to a member in the database. The GUID is a single number which is common to both the DeviceDB and the MasterDB . When a FaceID is matched in the DeviceDB it is the GUID which is sent to the User_Account in order to query the MasterDB and return full details of the Member .

Interfaces	Interfaces are how the Device interacts with other machines. The interfaces available are USB (X 2), Ethernet , Control_OUT (X2) and Serial.
IP Cameras	IP Cameras are cameras which are not directly connected to the ICU Device. They are typically cameras which are located on and accessed via a network. ICU device uses the streaming protocol of rtsp .
JSON Post	A JSON Post is a method the end user can utilise in order to integrate the ICU Device with their own existing software platform. For example, the JSON POST can be interpreted by the customers software to post alerts to specific devices (i.e Phones, Tablets). The JSON post is authenticated (requires password) and contains the GUID , FaceID , age estimate and DEVICE ID
MasterDB	The MasterDB is the database in which all information relating to a Member can be stored. This includes GUID , FACEID , Name, Image, DOB etc. This database is stored in the cloud and can only be accessed via the User_Account .
Member	A Member refers to a face added to the database. Members can be arranged into member Groups . Each member will have an associated FaceID . Member information is stored in the MasterDB .
rtsp	rtsp is the protocol that the ICU Device uses in order to communicate with IP cameras .

User_Account	<p>The User_Account is hosted in the cloud and is accessed by any browser enabled device. Each user has their own login details. Every device the user has is registered to the User_Account and as such, when a new Member is added all linked Devices are updated with the most up to date information.</p> <p>The User_Account is how users control all aspects of the ICU solution. The User_Account is used to setup all Devices, add Members, organise Groups and manage Actions. Any Device updates can be managed from the User_Account.</p>
---------------------	---
